AUTOMATED BUILDING DAMAGE CLASSIFICATION THROUGH THE FUSION OF REMOTELY SENSED DATA

Case study: Hurricane damage on St. Maarten

A graduation plan submitted to the Delft University of Technology in partial fulfilment of the requirements for the degree of

Master of Science in Geomatics for the Built Environment

by

Daniël Kersbergen

January 2018

5	TIME PLANNING	9
6	TOOLS AND DATASETS USED	11

ACRONYMS

1 INTRODUCTION

An introduction in which the relevance of the project and its place in the context of geomatics is described, along with a clearly-defined problem statement.

Dominici et al. [2017] cites something as a noun, and it's also possible to put the references between parentheses at the end of at sentence [Montgomery et al., 2016]

2 | RELATED WORK

A related work section in which the relevant literature is presented and linked to the project.

3 RESEARCH QUESTIONS

The research questions are clearly defined, along with the scope (ie what you will not be doing).

4 | METHODOLOGY

Overview of the methodology to be used.

5 | TIME PLANNING

Having a Gantt chart is probably a better idea then just a list.

6 TOOLS AND DATASETS USED

Since specific data and tools have to be used, it's good to present these concretely, so that the mentors know that you have a grasp of all aspects of the project.
